IS12-Si 是IS12的补充型号专门为测量硅晶体的温度而设计的远红外非接触式测温仪。  
此款测温仪应用了近红外线窄带设计，并带有一个窄带滤波器，这样就可以实现从350° 开始测量透红外线的硅晶体的温度。

IS10-AI在实际应用中对测量范围周围的外部光非常敏感，在升温过程中这种敏感性会越来越明显。因此在使用这款测温仪进行温度测量时要注意：刚开始在低温段进行测量时可以通过用隔绝光线的方法来避免光线对测量结果的影响。

Reference numbers (specify an optics when ordering):

3 854 270 IS10-Si with thru-lens view finder and targeting light, RS485

The **IS 10-Si** is a special version of the IS 10, developed for the temperature measurement of silicon wafers. The pyrometer is equipped with a optical narrow band filter in the near infrared. This enables a reliable measurement of thin silicon from 350°C which otherwise is

transparent for infrared radiation. In this special spectral range the emissivity of silicon is 67% and it is almost independent from temperatures. This allows the **IS 10-Si** to detect the correct temperature of the silicon wafer.

In the beginning of the temperature range the **IS 10-Si** is sensitive against light. This sensitivity decreases with increasing temperature. In applications which require the low temperatures at the beginning of the range this effect can be avoided by screening against the light.
